PROFILE

Cloud Platform & Reliability Engineer with 4+ years of experience operating production AWS systems in regulated healthcare environments. Strong expertise in cloud networking, observability, incident response, and production release support, working on high-availability, business-critical platforms. Proven in diagnosing and resolving latency degradations, Lambda throttling, scaling failures, and data-pipeline issues across EC2- and serverless-based architectures.

EDUCATION

Saint Peters University, Jersey City, NJ
M.S., Data Science – Nov 2021

Indus Institute of Technology, Gujarat, India
Bachelor of Technology, Computer Engineering – May 2018

PROFESSIONAL EXPERIENCE

Cloud Platform and Reliability Engineer

Jan 2023 – Present

Tata Consultancy Services (TCS), **Client:** Cigna Healthcare | Bloomfield, CT

- Operated and supported production AWS architectures for insurance intake and quote processing platforms, handling high-volume API traffic and batch workflows for presale and renewal use cases.
- Handled multiple P2–P4 production incidents per month, including latency degradations, Lambda throttling, and scaling failures, performing root cause analysis across compute, storage, and networking layers.
- Diagnosed and resolved recurring AWS Lambda throttling during peak traffic periods by tuning concurrency limits, retry behaviour, and alert thresholds.
- Resolved a critical EC2 Auto Scaling incident where instances failed to register with Application Load Balancer target groups, restoring traffic flow and preventing prolonged service disruption.
- Supported regular production releases, ensuring stability by monitoring RDS performance during bulk operations, validating queue backlogs, tuning Lambda and SQS concurrency, updating DynamoDB configuration tables, and verifying post-release data integrity using SQL (PostgreSQL).
- Participated in production releases for hybrid EC2 and EKS-based workloads, performing controlled pod restarts and post-release health validation.
- Built and maintained 3 Grafana dashboards with 10+ panels each and implemented Dynatrace APM and synthetic monitoring across API endpoints and scheduled health checks.
- Performed log analysis using Splunk and managed production incident workflows through ServiceNow, acting as resolver and participating in war rooms.
- Authored and maintained runbooks, SOPs, and RCA documentation, improving incident response consistency and reducing MTTR.

Python API Developer (AWS)

Feb 2022 - Dec 2022

Tata Consultancy Services (TCS), **Client:** Cigna Healthcare | Bloomfield, CT

- Developed and maintained Python-based APIs using AWS Lambda and API Gateway, enabling secure, scalable communication between distributed systems.
- Implemented OAuth 2.0 authentication with Okta and Lambda Authorizers to enforce access control and compliance requirements.
- Automated infrastructure and application workflows using Terraform and Python, improving deployment consistency and reducing manual intervention.
- Supported API testing and debugging using Postman, reducing integration failures and improving reliability.

SKILLS

Cloud & Networking: AWS (VPC, Subnets, Route Tables, Security Groups, NACLs, EC2, Lambda, S3, RDS, ALB/NLB, API Gateway, Route 53, IAM)

Reliability, Monitoring & Incident Management: CloudWatch, Grafana, Dynatrace (APM & Synthetics), Splunk, SNS, ServiceNow, Incident Response, RCA, Monitoring & Alerting

Infrastructure & Automation: Terraform, Git, Jenkins, Docker

Programming: Python, Bash, SQL

Certifications: AWS Certified Cloud Practitioner, AWS Certified Developer, Microsoft Azure Fundamentals (AZ-900)
